OGS boosts Asset Operations Support through expert engagement

Perth-based engineering, consulting, and management services provider OGS Group has increased its Asset Operations Support capacity with the appointment of industry veteran Frank Broomhead to manage its efforts in this area.

OGS Group focuses on optimising the commissioning, start up, and operational performance of assets across the energy and resource industries. Recent years have seen constant growth in delivery of Asset Operations Support and Optimisation Services, assisting clients with the development and implementation of more efficient and sustainable operational work processes. The increase in marketplace demand for and recognition of the value of these services has led to Frank's engagement to allow OGS to expand its leadership in this area.

Frank has over 35 years' experience working with Shell companies worldwide, in both onshore and offshore environments at supervisory and senior management level. As an Operations Readiness Manager and Operations Manager, Frank was responsible for production operations of offshore platforms, onshore processing facilities and onshore gas and condensate pipelines from the commissioning phase through to achieving steady-state production.

He has developed key operational documents and procedures, established and implemented competency assurance programmes, implemented remote monitoring systems for unmanned facilities, and introduced dual-skilled teams and campaign maintenance.

Frank joined OGS in January 2017 as a Production Operations Consultant to provide operations readiness and assurance expertise, and to undertake operations and maintenance effectiveness assessments. In leading the development of OGS' Asset Operations Support capabilities, Frank's role will widen to cover business development, the engagement of operations support on new projects, and the management and expansion of ongoing support on existing projects.

OGS Group COO Peter Winterbourne says the leadership role adopted by Frank will strengthen and expand the group's Asset Operations Support services.

"OGS is driving operational planning into design, implementing operational readiness and assurance programs, and integrating the execution of these programs with facility commissioning," Mr Winterbourne said.

"OGS supports clients through the operations lifecycle, assessing asset operations and implementing solutions to ensure facilities can be operated in the most efficient, safe, and sustainable way.

"With Frank leading our Asset Operations Support, we will be able to support a greater volume and quality of expert services to clients looking to maximise the efficiency and sustainability of assets".
